● Flame Retardant ● Non-Flame Retardant

Flame retardant film prevents and delays combustion in the early stages of a fire.

23-24 TREND SUMMARY

MAIN THEME
ESSENTIAL

Even though the attitude of admitting the balance between the value of life and individual variety while living with the environment is very basic, we have forgotten about it in an age of rapid change. So KCC GLASS suggests the ESSENTIAL, which manifests the importance of recognizing nature in uncertain life, as the main theme for 2023/24. Let's think about the values that are essential above all else but are sometimes trivially forgotten through familiarity.

Theme 01 Balance of daily life

BALANCE

In a modern society where uncertainty is saturated, anxiety characterizes both time and culture. Therefore the lifestyle to maintain the balance between body, mind, and emotion is attracting attention. So, BALANCE suggests warm and soft minimalism. Neatness without complexity, and calm shades are the points. Also, the palpable softness and comfort, which are used as the main factors, will take a pivotal role.

Super Matt Solid SM934

Ash KW228

Oak PW724

Theme 02 Expression of individuality

EXPRESSION

We are now living in a society where individuality is respected. Customers no longer accept old-fashioned market goods but prefer the goods that meet their tastes. So EXPRESSION offers suggestions for those who actively express their preferences and opinions. It borrows a retro mood that is continuously trending and expresses an optimistic and individual style with decisive color, face division and bold patterns.

Painted Texture	PP692	Painted Wood	KP555

Theme 03 Trace of nature

TRACE

2022 was a harsh year with adversities like climate disasters. Theme 3, TRACE focuses on the answers left by the trace of nature in our lives when we have to weather climate crisis. This theme consists of a new perspective on nature, a design inspired by the time it has spent, and a motif of the fusion of nature and artificiality. It can be reminiscent of rich texture, a pattern of nature, and the seriousness of nature with dark colors.

CERTIFICATION

Creates a healthy and safe future with Eco-friendly HOMECC interior film.
Discover designs for more perfect space with various eco-friendly interior films.

Eco-Friendly & Safety certified product

01 It is the highest grade eco-friendly product that passed the indoor air quality process test standard of the Koea Ministry of Environment.

02 It is a low-carbon product that has been certified by the Korea Environmental Industry and Technology Institute.

03 As a result of the phthalate-based plasticizer content test conducted by the Korea Testing & Research, none of the substances were detected.

DEHP	DINP	DBP	BBP	DNOP	DIDP	DIBP
N/D	N/D	N/D	N/D	N/D	N/D	N/D

04 As a result of the 4 major heavy metal detection tests conducted by the Korea Testing & Research, none of the substances were detected.

Lead(Pb)	Cadmium(Cd)	Mercury(Hg)	Chromium(Cr)
N/D	N/D	N/D	N/D

Flame-retardant test

01 It is a safe product that has passed the flame retardant performance test of the Korea Fire Industry and products that have passed the test are marked as flame retardant.

02 HOMECC interior film flame retardant products are safety-conscious products that have obtained flame standards.

03 The flame retardant interior film plays a role in preventing and delaying combustion in the early stages of a fire.

ECO-PLUS RELEASE PAPER

HOMECC Interior Film Eco Plus release paper is custom-made as an option.
Constructability was secured by applying the air-free method.

ECO-PLUS Sample comparison

ECO-PLUS has been confirmed to have alkali dissociation and alkali dispersibility through Fiti Testing & Research Institute.

INTERIOR STYLE

<3 LIFE STYLE CONCEPT>

You're thinking about what to use for the flooring and what kind of wallpaper will go well with it. We are going to analyze your lifestyle to make your interior style better. We suggest that as a trend leader, you can set a standard for your lifestyle. Present the design of the interior package that the customer is satisfied with we provide an ideal living space.

SOFT

Classy Life Style

A classy lifestyle that adds practicality to elegance.

Rather than copying someone, you can say that you have a special taste in expressing yourself with your own emotions. They pursue a colorful but refined style and a socially stable life. You pay attention to even a small item and find pleasure in it.

ORGANIC

Natural Life Style

A healthy lifestyle seeking healing from nature.

It is a space style for people who need daily relaxation and healing from nature. They want to pursue physical and mental health and relax and heal those who are tired of intense work and daily life at home. It's not something you buy cheaply and throws away quickly, but through long-term consumption, it is common to save and manage good items that can be handed down from generation to generation.

TRENDY

Smart Life Style

A smart lifestyle where you can feel the city life.

We would like to actively utilize mobile devices to solve leisure activities such as schedule management and information search, shopping, music, and watching movies, as well as communication with friends. We want to be sensitive to social issues and invest in areas that we think are important. And also, we select a variety of products that can improve the quality of life, and enjoy the convenient daily life it gives.

SOFT

PRECAUTIONS FOR CONSTRUCTION

The color may be different depending on the production lot, so be sure to check during construction. Please refer to the construction guide below or the construction video through the QR code on the right for detailed construction methods.

INTERIOR FILM CONSTRUCTION VIDEO
Meet the convenient construction method!

HOMECO INTERIOR CHANNEL

Preparation before construction

01 Check the type and condition of the adhesive target on which the film is to be installed, and check the areas where problems may occur during construction.
- In the case of MDF, it is necessary to use MDF with a uniform density because the difference in adhesive strength and flame retardant performance occurs depending on the client.
- In the case of woodother than MDF), if it is not sufficiently dried, the adhesive strength may deteriorate due to the influence of moisture, so be sure to check the drying condition.
- It is the most effective on a flat surface. So the irregularities on the surface must be putted with a grinder or sand paper. (The construction area must be sufficiently putted)
- Contaminated areas on the surface degrade the adhesion to the film, so you must remove any contaminants such as dust or oil that has been stained with alcohol or thinner.

02 The product should be constructed with the same color and lot product.

03 Films and primers are stored in the site 24 hours before construction, and maintained at 15℃ or higher from 24 hours before construction to 48 hours after construction. (Peeling may occur due to reduced adhesive strength during construction under low temperature conditions)

04 Cut with 4~5cm margin and the cutting line printed on the back side may be different from the actual value, so use a tool such as a tape measure for accurate cutting.

Primer treatment

01 It is necessary to apply thickly to the corners, the back of the curved surface, and the cutting surface (especially wood) compared to the general area. (Overlapping should be performed after the primer is completely dried)

02 After primer application, it should be completely dried for 4 hours or more and adhere the product within 12 hours. (The drying time may vary depending on the working environment, ambient temperature, wood condition, etc., so it must be thoroughly dried)

Cautions during construction

01 Please use our designated products for primer, and do not smell or eat as it is harmful to the human body.

02 Oily primers contain flammable organic solvents, so be careful of fire (or flammable).

03 When working with primer, avoid work in an enclosed space and ventilate. Do not use for purpose other than interior surface finishing materials (flooring, outdoors, etc.)

04 Be careful not to get caught with a knife or awl.

Storage / Transportation / Maintenance / Management

01 When storing the product, pay attention to the fall, and keep it in the packaging box and store it in the box.

02 Do not throw or drop the product box, as there is a risk of damage.

03 Be careful of freezing water-based primer in water.

04 Please note that there is a risk of discoloration caused by ultraviolet rays.

Special product construction notes

SM	- As it is a product coated with a special surface coating, be sure to set the room temperature to 15℃ or higher when installing corners. - When wiping the surface after construction, be careful not to damage it by using neutral detergent or water. - In order to realize the matt effect, it is necessary to remove foreign substances (dust, etc.) from the adhesive product and the surface. (Otherwise, construction defects such as protrusion or surface dents may occur)
KS / PP / KP	- As the surface area of the product is weak, it may cause damage to the surface if it is rubbed strongly during construction.
PM	- Please pay special attention to the construction of the surface layer due to detachment between the films on the overlapping construction site.
PL/KL	- When overlaying the product on the existing film, it must be treated after the oil-based primer treatment to prevent shrinkage. - Do not overlapping the product because there is a possibility of peeling due to embossing and surface treatment layer. - When it is inevitable, the overlapping area must be treated with an oil-based primer to prevent lifting. (We are not responsible for defects caused by overlapping construction) - As the surface of the product is weak, it may cause damage if it is rubbed strongly during construction. - In order to maximize the effect, it is necessary to check condition of the adherend, and to remove substances(dust, etc.) on the adhesive surface. (Otherwise, there is a possibility of construction defects such as desorption and deterioration of visual effects)
